Talon[®]

RAT & MOUSE KILLER

ALL WEATHER WAX BLOCKS

ACTIVE CONSTITUENT: 0.05g/kg BRODIFACOUM

- **No Mess**
Simply place or nail in position
- **For use in and around agricultural, commercial, domestic, industrial and public service buildings**
- **Use in damp or dry areas**

**One
Feed**

KILLS RATS & MICE

Kills rodents resistant to Bromadiolone, Coumatetralyl and Warfarin

**CONTAINS HUMAN
TASTE DETERRENT**

IF IT'S SELLEYS IT WORKS[®]

Talon

RAT & MOUSE KILLER
ALL WEATHER WAX BLOCKS

DIRECTIONS FOR USE

Restraints

DO NOT APPLY WAX BLOCKS TO CROPS
DO NOT PLACE WAX BLOCKS IN THE OPEN
DO NOT EXCEED 3m BETWEEN BAIT STATIONS FOR MICE OR 9m FOR RATS IN CLEAN OUT TREATMENTS

Baiting Strategy

- Eliminate all alternative food sources as far as practical.
- Bait infested area. Place wax blocks under cover.
- Actively search for, remove and destroy dead and moribund rodents whilst wax blocks are being used.
- Ensure wax blocks are removed when rodent activity has ceased.

Clean Out Treatments (Pulse Baiting)

- Clean out treatments are used to remove existing infestations of rats and mice.
- For rats place 1 to 3 wax blocks at intervals of 5 to 9m in infested areas.
- For mice place single wax blocks at 2 to 3m intervals in infested areas.
- Use the greater number of wax blocks and shorter distance between wax block placements when infestations are heavy.
- Nails or wire may be used to fix wax blocks to prevent them being removed by rodents. Alternately, wax blocks may be secured in bait stations.
- Place wax blocks so as to prevent access to non-target animals.
- Use tamper resistant bait stations at locations where access by non-target animals cannot otherwise be prevented and fix the stations securely with nails or wire where necessary.
- Always record the number and locations of wax blocks for the purpose of replacement and later removal.
- Conduct initial inspection of wax blocks after 3 or 4 days. Replace wax blocks that have been consumed. Repeat approximately 4 days later and then weekly. Replace contaminated or spoiled wax blocks.
- Baiting for at least 2 weeks (3 to 4 pulses) will be necessary to reduce rat/mouse numbers to a low level. Although heavy infestations may require longer treatments to achieve complete eradication.
- Discontinue the treatment when effective control has been achieved and remove all wax blocks and bait stations unless a maintenance treatment is to be undertaken.

Monitoring and/or Maintenance Treatments

- Monitoring and maintenance treatments are required at sensitive sites where there is no current rodent infestation but where the prevention of such infestation is essential to prevent significant risks to human health. Such treatments may be a condition for audit approval within food safety guidelines. However, use of this product must comply with the conditions of this label.
- For rats and mice place 1 wax block at intervals of between 15 and 30m in areas prone to rodent infestation.
- Always use tamper resistant bait stations and fix the stations securely with nails or wire where necessary.
- Place bait stations so as to prevent access to non-target animals.
- Always record the number and locations of bait stations for the purpose of wax block replacement and later removal.
- Bait stations should be checked at regular intervals according to an agreed and documented schedule.
- When a rodent infestation is detected revert to the directions for Clean Out Treatments.

Application

Situation	Pests	Rate	Critical Comments
Agricultural, Commercial, Domestic, Industrial and Public Service buildings	Rats (<i>Rattus rattus</i> , <i>R. norvegicus</i>), Mice (<i>Mus domesticus</i>)	1 to 3 wax blocks/bait station	Set out wax blocks in places frequented by mice and rats in and around buildings (within 2m) or enclosed spaces, eg drains. Clean out treatment For rats: Place 1 to 3 wax blocks at intervals of 5 to 9m in infested areas For mice: Place single wax blocks at 2 to 3 m intervals in infested areas See also Monitoring and/or Maintenance Treatments

NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION

GENERAL INSTRUCTIONS

Ensure wax blocks are inaccessible to children, pets, domestic animals and wildlife. Wax blocks are particularly suitable for use in damp situations, sewers and crop stores where the risk of contamination should be minimised. Place wax blocks along walls or rafters and in dark sheltered spots where there are signs of rodent activity. Record the number and location of wax blocks for the purpose of replenishment and later removal. Most deaths occur 4 to 7 days after consumption of wax blocks. Look for dead rats or mice and burn or bury them.

Note: One feed is sufficient to kill rats and mice. Rats and mice will continue to eat the wax blocks after a lethal dose has been eaten.

PRECAUTION

Avoid contact with food, food utensils or places where food is prepared or stored.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT

Depending on the amount eaten, this product may kill or injure. The wax blocks are hazardous to dogs, cats, pigs, poultry and other wildlife. DO NOT place wax blocks in locations which are accessible to pets, domestic animals, livestock or birds. DO NOT contaminate dams, waterways and drains with the wax blocks or the used container. The use of this product for the control of protected native rodents and rodent like animals requires permission from wildlife authorities. The product is restricted to use in and around buildings (within 2m) or enclosed spaces, eg drains.

STORAGE AND DISPOSAL

Store in the closed original container in a cool, well ventilated area. DO NOT store for prolonged periods in direct sunlight. Break, crush, puncture and deliver empty containers and unused bait to an approved waste management facility. If an approved waste management facility is not available, bury the empty containers and unused bait 500 mm below the surface in a disposal pit specifically marked and set up for this purpose, clear of waterways, desirable vegetation and tree roots, in compliance with relevant local, state or territory government regulations. DO NOT burn empty containers or product. DO NOT use containers which have held bait for any other purpose. Look for dead rats or mice and dispose of carcasses safely by burning or burying in an approved landfill. Ensure baits are removed when rodent activity has ceased.

SAFETY DIRECTIONS

Poisonous if swallowed. DO NOT touch wax blocks. If on skin and after each baiting, wash thoroughly with soap and water. Vitamin K1 (Phytomenadione) is antidotal.

FIRST AID

If poisoning occurs, contact a doctor or Poisons Information Centre. Phone 131 126. Vitamin K1 (Phytomenadione) is antidotal.

NOTE TO PHYSICIANS AND VETERINARIANS

Brodifacoum, the active constituent of TALON, is a long lasting anticoagulant chemical, which if ingested by humans, domestic animals or pets, can reduce the clotting power of the blood and haemorrhage may result. Vitamin K1 (Phytomenadione) should be administered urgently by medical, appropriate paramedical personnel or veterinarians. If administered intravenously the injection must be given slowly.
